

Full Stack Developer | FinTech

Full Stack Developer with almost 2 years of experience delivering secure, scalable web applications in **Banking domain** using **Angular, TypeScript, Oracle** and **.NET Core**. Proven expertise in performance optimization, clean architecture, and **RESTful API** development. Strong track record of cross-functional collaboration and end-to-end ownership of critical modules, delivering enterprise-grade solutions aligned with business objectives.

Technical Skills

Programming Languages: TypeScript, JavaScript, HTML5, CSS3, SQL, C#

Frameworks & Libraries: Angular, Bootstrap, .NET Core

Tools & Technologies: Visual Studio, VS Code, Postman, WinSCP, PuTTY, RDP, Git, Azure DevOps (CI/CD Pipelines), PM2, Redis, Nginx

Core Concepts: Microservices Architecture, Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP)

Databases: Oracle, SQL Server

Operating Systems: Linux, Windows

Software Practices: Agile Development, RESTful API Design, Secure Coding (AES-GCM), Application Deployment & Monitoring.

Work Experience

Atyati Technologies Pvt Ltd

June 2024 - Present

Full Stack Ownership & Production Deployment:

- Led complete end-to-end development and deployment of an enterprise banking platform, independently managing frontend (Angular), backend (.NET Core), database (Oracle), and production infrastructure setup.
- Designed and configured Linux (RHEL 9.6) production environments within the bank's infrastructure, installing and optimizing Nginx, Redis, .NET 8 SDK, Node.js, and PM2 for scalable application hosting.
- Architected and deployed secure RESTful APIs for critical banking modules including eKYC onboarding, user lifecycle management, bulk operations, and regional/branch administration.
- Implemented AES-GCM encryption and decryption mechanisms to ensure data-level security compliance aligned with financial-grade standards.
- Designed and optimized Oracle database schemas, including stored procedures, triggers, functions, and views to improve data integrity and query performance.
- Built a scalable Angular-based Admin Portal using Reactive Forms and RxJS with modular architecture, improving UI responsiveness and long-term maintainability.
- Managed API routing, versioning, and endpoint optimization while securely hosting Admin APIs and General APIs in production.
- Conducted comprehensive end-to-end validation across UI, API, and database layers to ensure performance benchmarks and functional accuracy.
- Diagnosed and resolved production issues using log analysis and query profiling, maintaining stable deployments and zero downtime.
- Collaborated in Agile ceremonies with QA and business stakeholders to deliver secure, high-quality releases within sprint timelines.

Fraud prevention & Device Integration:

- Led end-to-end front-end development and backend integration for a banking operations platform, ensuring seamless communication between application layers.
- Integrated GPS tracking devices (UGR-86, OPL, Tatvik) with server-side validation logic to enable real-time device-level authentication.
- Designed and implemented fraud detection validation rules based on device telemetry data.
- Developed core operational modules including Document Management, Issuer RRN Enquiry, and User Profile Download to streamline internal banking workflows.
- Achieved a 60% reduction in fraud incidents through GPS-based device validation and strengthened transaction traceability.

Frontend Performance Optimization:

- Optimized Angular-based front-end modules by refactoring component lifecycle handling, lazy loading, and API call management, improving application load time.
- Redesigned UI architecture using a modular, reusable component structure to accelerate feature development and reduce code redundancy.
- Improved state management and rendering performance to enhance responsiveness across high-traffic banking workflows.
- Collaborated with backend teams to streamline API consumption and minimize unnecessary payload processing.
- Delivered a 45% performance improvement and significantly enhanced user experience in a production-scale banking application.

UI Refactoring & Stability Enhancement:

- Refactored legacy UI components to improve system stability, reduce technical debt, and enhance long-term maintainability.
- Standardized component structure and improved code reusability to support scalable feature enhancements.
- Collaborated closely with QA and product teams to identify UI inconsistencies and resolve cross-browser compatibility issues.
- Optimized rendering behaviour and responsiveness to ensure consistent performance across production environments.
- Improved platform reliability, reduced production UI defects, and enhanced cross-browser user experience.

Education

Vidya Vikas Institute of Engineering and Technology
Bachelor of Engineering in Computer Science, CGPA: 8.56

Mysuru, Karnataka
December 2020 - May 2024

Achievements

- Awarded as Rising Star for making impactful contributions to the company (FY Q3 2024-2025).
- IEEE National Level Flagship Event (Ideathon) 2022 - First Place.
